--This is the new edition of the concise but comprehensive handbook that should be owned by all surgical trainees specialising in plastic surgery. Taking a pithy systematic approach, Key Notes on Plastic Surgery offers the latest developments within the field in bullet point form and includes key papers for viva voces. It is informed by the current FRCS (Plast) curriculum, making it ideal preparation for the UK exit examination or equivalent international board exam. Key features: Fully covers the entire scope of plastic surgery. Clearly divided into 10 sections with logical subheadings for easy fact-finding. Acts as an adjunct to the established longer texts. Brand new chapter on ethics and the law - a compulsory component of the oral examination. Illustrations outlining key surgical procedures and relevant anatomy. Fully revised to include all the latest clinical guidelines. Key Notes on Plastic Surgery is the perfect rapid reference tool for trainees in plastic surgery and dermatologic surgery who require quick, accurate answers. The definitive one-stop reference on safely navigating highly complex facial anatomy. The primary goal of Facial Danger Zones: Staying safe with surgery, fillers, and non-invasive devices is to help surgeons achieve optimal results and maximize safe outcomes for a wide array of facial cosmetic procedures. Authored by internationally renowned plastic surgeon Rod Rohrich and distinguished co-authors James.
Stuzin, Erez Dayan, and E. Victor Ross, this user-friendly book provides multidisciplinary insights and expert knowledge on intricate facial anatomy, navigating safe and dangerous facial zones, and the use of minimally invasive technologies. The book is divided into three sections: Part one provides an overview of facial tissue anatomy and fat compartments, facial nerve danger zones, specific nerve branches, protective measures, and technical dissection considerations for safe facelift surgery. Part two covers fillers and neuromodulators with pearls and in-depth guidance on staying safe using six different facial danger zones. Part three details the safe use of energy-based devices such as ablative and non-ablative lasers, combination chemical peels, radiofrequency, and cryolipolysis. Key highlights Superb facial nerve dissection safety tips for cosmetic procedures such as facelifts Facial danger zones and the prevention and consequences of injury graphically described through cadaver dissections, illustrations, and patient case photographs Visually-rich text describes how to safely and efficaciously administer lasers, chemical peels, noninvasive fat removal, and skin tightening devices More than 20 succinct videos posted online enhance understanding of various safe approaches This remarkable resource is destined to be the trusted, go-to companion for trainee and veteran surgeons who specialize in plastic, facial plastic, dermatologic, oculoplastic, and head and neck surgery, as well as other practitioners who treat these patients. The knowledge of anatomy simplifies the injection of fillers, fat and threads. By the 5 layers anatomy-based protocol, it is easier to do medical treatments preserving the nerves and the vessels. The step by step approach is the best prevention of disastrous complications such as necrosis or blindness. Written by two renowned international experts in the field, this book gives a brilliant overview of the use of botulinum toxin A in aesthetic medicine, including patient selection and evaluation, as well as rules and requirements. It provides hands-on information for the most common indications, such as forehead and glabella, lateral brow lift, crow's feet and lower eyelid, bunny lines and marionette lines, nose and nasolabial folds, cheeks and "gummy smile," upper and lower lip, and the chin and neck. Also included are the more advanced indications, such as facial asymmetries, Btx-A lifting and microinjection
techniques. Combination therapy and complications are also covered and a section with tips and tricks makes this book an invaluable resource for the practicing dermatologist, plastic surgeons and all other physicians interested in the field of aesthetic medicine. This bestselling guide to the complexities of botulinum toxins has now been extensively revised, updated, and expanded. Now in two volumes, Volume 1 examines clinical adaptations in the toxins in use today, use with other injectables, use for other parts of the body and other indications, and legal aspects, while Volume 2 documents in detail the functional anatomy and injection techniques for the face, neck, and upper chest. No practitioner of aesthetic medicine will want to be without this comprehensive and authoritative guide from the international experts.

Calcium Hydroxylapatite: Expert Treatment Techniques is a hands-on reference book, created with the input of the world’s leading experts on the use of this leading biostimulatory soft tissue filler. It can be used by all aesthetic medical professional injectors to study the relevant anatomy, aesthetic target sites, and injection techniques and to review the safest and most effective treatment protocols available for this versatile product. As a training aid the book contains multiple photographic sequences as well as schematic diagrams to help in clarifying the proposed techniques. The book includes not only the official on-label indications; various international experts also share their ways of tweaking the standard protocols and their innovations. There are links to procedural videos in the Support Material on the companion website.

Aesthetics is much more than just being physically appealing. It is a lifestyle, a way of life. One does not attain aesthetic perfection over night. It takes years of consistency to shape your physique into a masterpiece, but more, it takes you to change your entire outlook on life. Filler techniques are the most widely used surgical procedures in cosmetic surgery, as they are the best method of reducing wrinkles on a long-term basis. For years, dermatologists have known that water-binding soft-tissue fillers can replace the loss of collagen, elastin, and hyaluronic acid from the skin. Because filler formulas and application techniques are constantly updated and reevaluated, the dermatologist and cosmetic surgeon need a quick reference
on the subject. This new text, edited by world-renowned dermatologist Dr Neil S. Sadick, covers all the main aspects of soft-tissue filler techniques. Subjects covered include choosing and applying fillers; short-, intermediate-, and long-acting fillers; and combination approaches, as well as anesthetic considerations, equipment and patient positioning, operative procedures, potential complications, and postoperative evaluation. The use of injectables, known as dermal fillers, is becoming ever more popular in aesthetic medicine. Full-face and full-body treatments using such fillers are increasingly substituting for various surgical techniques; not only do they provide immediate results at a lower cost, but they also avoid the use of general anesthesia and shorten the recovery period. In addition, dermal fillers can be successfully used for body remodeling, for example in patients with bow legs and those requiring breast remodeling. This book outlines the fundamental principles of the use of different fillers and injection techniques in the treatment of facial and body areas. An impressive collection of sequential color photographs illustrate the procedures step by step and demonstrate the results. The volume will be an invaluable tool for aesthetic doctors, practicing dermatologists, plastic surgeons, and all other physicians interested in the field of aesthetic medicine. This book offers an excellent and comprehensive overview on the clinical use of fillers in aesthetic medicine that will assist both novice and advanced practitioners. Based on an evidence-based perspective, the book opens by describing the most common fillers, with information on their characteristics, efficacy and safety. The main part of the book then explains how to use fillers for the most frequent facial indications, such as the glabella, nasolabial folds, infraorbital hollow, nose, cheeks, lips and marionette lines. This new edition also includes chapters on extrafacial indications and treatment planning. All specific aesthetic procedures for the facial and extrafacial areas are described step by step, with the emphasis on a hands-on approach that highlights important do’s and don’ts. The book concludes with chapters on how to deal with adverse reactions and how to combine fillers with other aesthetic procedures, ranging from botulinum toxin A to plastic surgery. The gliding nature and dynamic planes of the face present one of the great
challenges in aesthetic surgery and volume replenishment is a key component of the treatment algorithm. Facial Volumization: An Anatomic Approach by Jerome Lamb and Christopher Surek masterfully bridges the gap between the anatomy lab and injection clinic. It synthesizes a large body of facial anatomy publications into a "one-stop shop" covering a wide array of facial procedures - from the chin and perioral - to the midface and temple. In addition to vascular injury, lymphatic disruption can play a critical role in suboptimal aesthetic facial volumization outcomes. Chapter 2, The Lymphatic Anatomy of the Lower Eyelid and the Malar Region of the Face discusses new state-of-the art facial lymphatic discoveries. Key Features Numerous beautiful, full-page color illustrations systematically reveal each layer of the face - from deep to superficial - taking readers on a unique journey through the 3-D architecture of complex facial anatomy. The left side of each page features a written synopsis of the vascular, muscular, ligament, and adipose components of specific layers paired with cadaveric dissection photographs. More than 20 high-definition live patient injection videos posted in the Thieme online Media Center include detailed injector commentary. Augmentation and enhancement techniques, the latest facial fillers and lip injections, and illustrated guidance on preferred volumization approaches. Identification of danger zones and technical pearls for injecting safely, avoiding problems, and obtaining the best results. This invaluable resource will help residents and seasoned plastic surgeons, facial plastic surgeons, dermatologists, otolaryngologists, and aestheticians perform facial injections safely and achieve optimized results.A new guide designed to ensure confident prescribing in specialist areas. The need for this text stems from the necessity to develop non-medical prescribing in practice. It offers a resource for all non-medical prescribers including nurses, pharmacists, optometrists, physiotherapists and other healthcare professionals who desire to become supplementary or independent prescribers in their field. The book is divided into two comprehensive sections and provides an overview of non-medical prescribing by healthcare professionals other than doctors.Fully updated with the latest industry standards, this 5th Edition of the bestselling textbook, Professional Beauty
Therapy: The Official Guide to Level 3 by Lorraine Nordmann, has been restructured and written to reflect the changing needs of the beauty industry and advanced students working towards their Level 3 qualification. This well-trusted and respected book will appeal to beauty therapists who want to develop excellence in the beauty industry. Revised in line with the latest National Occupational Standards (2015), this book is delivered in Nordmann's trademark engaging and professional style. It is the only Level 3 textbook endorsed by Habia and VTCT, and is a must have for any advanced beauty therapy student. This book is suitable for those studying for the Level 3 qualification with all awarding associations. This title represents a comprehensive manual of periorbital rejuvenation and includes an in-depth review of the anatomy of the orbit and periorbital region. Physiological changes associated with the aging of the periorbital region and potential rejuvenation options are also covered, while readers are given a series of step-by-step illustrative guides to procedural techniques. The book provides a valuable selection of clinical pearls on how to avoid potential pitfalls using a number of cases in which a range of potential invasive and non-invasive treatment options, including neuromodulators and cosmeceuticals, are used. Periorbital Rejuvenation: A Practical Manual provides a comprehensive and concise overview of periorbital anatomy and the potential effects of aging. Cutting-edge laser treatment options including laser assisted and neuromodulator techniques are ideal for the trainee to develop their knowledge and as a reference guide for the experienced practitioner. This text is for anyone interested in the use of Botox and dermal filler agents for a wide variety of functional and minimally invasive facial rejuvenation procedures. The storage, reconstitution, and mechanism of action of botulinum toxin or Botox are all thoroughly explained. A thorough analysis is provided detailing the underlying facial muscle anatomy that is required and how physicians can integrate this procedure into their current practice. An additional section is also included detailing injectable filler agents, a more effective form of treatment for lines that are present at rest. As the demand for less invasive facial rejuvenation products and treatments continue to increase, Botox injections are emerging as the popular choice. While the
initial public reaction was guarded, the procedure is now common, as millions of individuals around the world are pursuing the cosmetic application of Botox for wrinkle reduction. The text utilizes a "how to" approach in teaching the ways Botox can remedy many functional disorders and conditions. Featuring the world famous skin care techniques of Dr. Zein Obagi, SKIN HEALTH AND REJUVENATION is a must have book for the dermatologist and plastic surgeon alike. With over 100 color photographs, the book provides the facial surgeon with a scientifically tested, safe and effective approach to providing patients with more youthful, healthier looking skin.
